DETAILED ACTION

Allowable Subject Matter

Claims 44-82 are allowed.

The following is an examiner's statement of reasons for allowance: a method of plasma processing a semiconductor substrate including:

applying inductively coupled power to a plasma via a first cycled power source, wherein greater than 5kW of power is coupled to the plasma during each high power cycle or the power source having a duty cycle within 5-30 percent; and applying a power to a substrate support via a second cycled power source; and

Synchronizing the first and the second cycled power sources such that the second power source provides high power cycles to the substrate support substantially during the time that the first power source provides low power cycles to the plasma.

Neither of the prior art of the record teaches or suggests applying high power cycles to the substrate support substantially during the time low power cycles are applied to a plasma which is generated by an inductively coupled plasma source using a cycled power source providing greater than 5kW of power to the plasma during each high power cycle or having a duty cycle within 5-30 percent.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
